

FOR IMMEDIATE RELEASE

Speedcast and In Aria! Networks Join Forces with Telespazio on Large-Scale, High-Capacity Video Services

New Managed Service Enables Secure, Flexible, and Efficient Digital TV Contribution, Cloud-Based Video Processing, Playout, and Multi-Platform Distribution

HAUPPAUGE, NY July 10, 2019 – Speedcast, the world’s largest provider of remote communications and IT services (ASX: SDA), today announced a joint service offering with In Aria! Networks, one of Europe’s leading service providers in managed broadcast video contribution over IP, and Telespazio, a leading provider of digital TV platforms and satellite transmission in Europe. Relying on a combination of In Aria! Networks’ redundant video contribution over IP gateways integrated with the Speedcast Media Network (SMN) and Telespazio video teleports, media companies around the globe can securely contribute and deliver SD, HD, and UHD video services with unparalleled efficiency, flexibility, and a faster time to market.

The joint service offering from Speedcast, In Aria! Networks and Telespazio is designed to speed up cloud-based IP video contribution, media processing and satellite-based digital distribution. The offering includes a wide range of cloud-based value-added services, such as backhaul, media conversion, high-quality, low-latency live streaming, and occasional use secure IP contribution, as well as multichannel digital TV platforms on the leading European Direct-to-Home satellite position.

Telespazio’s -digital video teleport facilities in Fucino Space Center, Italy - that with its 170 antennas is recognized as the first and most important “teleport” in the world for civilian use - offer a broad satellite footprint for distribution of video channels across the Atlantic, Europe, Middle East, Africa and Indian regions. When combined with SMN’s low-latency fiber distribution network, multiple teleport locations around the world, and fully managed IP video transport service, they provide media companies with a large-scale, high-capacity global solution for delivering broadcast-quality video. In addition, the companies are collaborating on DVB-S and DVB-S2 Direct-to-Home satellites at 13° East to ensure improved video delivery across Europe.

“Uniting Telespazio’s DVB-S2 digital video platforms with In Aria! Networks’ innovative media transport technology and the Speedcast Media Network will have a huge impact on multi-platform video delivery,” said Alessandro Caranci, Head of Line of Business Satellite Communications at Telespazio. “Our customers can now have access to a cloud-based IP video contribution and distribution network, making it easy and cost-efficient to deliver video in any region on any device.”

“We’re thrilled to partner with Telespazio, a major player in Europe, and Speedcast, who has a huge influence in North America and the Asia Pacific regions,” said Alberto Carpenè, CEO of In Aria! and Vice President of the Speedcast Media Network. “This joint offering sets a new benchmark for flexibility, enabling media companies to launch channels faster and more affordably.”

“Joining forces with Telespazio and In Aria! Networks allows us to address a critical growing need in the media market for hybrid video services,” said Erwan Emilian, Executive Vice President of Enterprise and Emerging Markets at Speedcast. “This partnership represents the fastest and most efficient way to backhaul video feeds, the widest network capacity for video distribution, and the broadest portfolio of value-added services, including cloud-based playout and media processing up to the satellite distribution on various satellites.”

About In Aria! Limited

In Aria! Networks is a leading live & secure video transport provider with its flagship Ottvideo CDN managed video transport network. The company developed a secure proprietary protocol over UDP and a Video Routing OS that helps service providers replace costly MPLS, 1+1 fiber dedicated networks and satellite contribution video links for low latency fully lossless broadcast and surveillance video contribution and distribution to media headends and surveillance video analytics clouds. In Aria! Networks Live CDN is powered by OttvideoOS, the video routing stack with MpegTS, RTSP and SDI Inputs and Outputs running on different proprietary networking gear, virtual machines and carrier grade equipment. In Aria! Networks is focused on changing the way professional live video is distributed and consolidated globally, with a more efficient, faster, and flexible software based "over the top" approach. OttvideoOS is currently in use by many leading Media Organizations, Content Providers, TV Headends and Cloud Video Analytics vendors. Learn more at: www.inaria.me
